SUMMARY

Computer Science undergraduate specializing in AI & Machine Learning with experience building production-ready AI applications using Python, FastAPI, React.js, LangChain, Google Gemini, and Retrieval-Augmented Generation (RAG). Strong foundation in software engineering, REST APIs, full-stack development, and scalable AI systems.

TECHNICAL SKILLS

Languages	Python, C++, Java, JavaScript, SQL
AI/ML	LLMs, Generative AI, LangChain, RAG, Google Gemini API, Sentence Transformers, Scikit-learn, TensorFlow, PyTorch, Prompt Engineering
Backend	FastAPI, Flask, Node.js, REST APIs
Frontend	React.js, Streamlit, HTML, CSS, JavaScript
Databases	MongoDB, MySQL, ChromaDB
Tools	Git, GitHub, Docker, Pandas, NumPy, BeautifulSoup, MLflow, Render, Vercel
Core CS	Data Structures & Algorithms, OOP, DBMS, Operating Systems

PROJECTS

MediMind AI – Intelligent Clinical Decision Support System <i>GitHub</i>	Jul 2026–Present <i>Python, FastAPI, React, ChromaDB, Gemini, RAG</i>
– Developed an AI-powered clinical decision support system using FastAPI, React.js, ChromaDB, and Google Gemini for intelligent medical report analysis. – Implemented a Retrieval-Augmented Generation (RAG) pipeline using ChromaDB and Sentence Transformers for semantic search and evidence-grounded responses. – Built scalable REST APIs and an automated PDF processing pipeline to extract laboratory parameters from CBC and LFT reports. – Integrated Google Gemini with prompt engineering to generate clinically relevant summaries while reducing hallucinations. – Developed an interactive React.js interface for report upload and AI-powered report interpretation.	
Multi-Agent AI Research Assistant <i>Live Demo — GitHub</i>	Jun 2026–Jul 2026 <i>Python, LangChain, Gemini, Streamlit</i>
– Designed and deployed a production-ready multi-agent AI system for automated web research. – Developed custom tools integrating Tavily Search API and BeautifulSoup for information retrieval. – Implemented Search, Writer, and Critic agents using prompt engineering and tool orchestration. – Deployed on Render with an interactive Streamlit frontend.	
Customer Churn Prediction System <i>Live Demo — GitHub</i>	May 2026–Present <i>Python, Flask, Docker, Streamlit</i>
– Developed and deployed a production-ready churn prediction platform using Flask, Docker, and Streamlit. – Built an end-to-end ML pipeline for preprocessing, training, evaluation, and inference. – Achieved 82% accuracy and 0.86 ROC-AUC using Logistic Regression. – Designed an interactive dashboard for churn prediction and retention insights.	

EDUCATION

VIT Bhopal University, Bhopal Bachelor of Technology in Computer Science Engineering (AI & ML) CGPA: 9.22/10	Sep 2023 – Present
Vidya Bharati Chinmaya Vidyalaya, Jamshedpur Class XII (CBSE) – 86.8%	2020 – 2022
Hill Top School, Jamshedpur Class X (ICSE) – 94%	2018 – 2020

ACHIEVEMENTS

- Solved **300+** Data Structures and Algorithms problems across coding platforms.
- **Co-Lead**, Design Team, IoT Club, leading design initiatives and collaborating on technical events and club activities.

CERTIFICATIONS

- Microsoft Azure Data Fundamentals
- Machine Learning in collaboration with Google for Developers
